Respecte als mascaretes, és un tema complicat, s'han de buscar específicament per la molècula concreta que vols bloquejar, i no pots fer-la servir massa hores per la incomoditat que suposa. I sospito que legalment cal un training específic per portar-les.

Josep, insisteixo que no podem posar becaris a fer feines que siguin potencialment perilloses. I més si cal training específic en matèria de riscos laborals. Haver de portar mascareta a la feina espanta a qualsevol nano (i més als seus pares). Vés amb compte.

Salut,

Daniel,

el nombre de tubs seria de com a molt 5.

La idea seria fer primer probes amb

- Nothing (ambient moisture)
- Ethanol saturated
- Synthetic air
- Water saturated

És a dir, es podria fer un invent similar al de l'etanol però amb aigua, per pujar el
